Miloslava Plachkinova, University of Tampa (mplachkinova@ut.edu)
Morgan Shepherd, University of Colorado Colorado Springs (mshepher@uccs.edu)

Submission Deadline
February 29, 2020

Publication Charge
APC Waived

SAGE Open
Member of the Committee on Publication Ethics (COPE)

Many journals publish on cyber and computer security. However, most focus on technology, systems, crime, and data protection. Those that consider organizational issues cover a broad scope and do not zero in on the aspects that most impact organizations. The SAGE Open Special Collection on Organizational Cybersecurity seeks to publish advances in scientific knowledge related to cybersecurity management. We target research relating to the behaviors and practices that influence successful management of cybersecurity in an organization. The collection welcomes papers from human, technical, and process perspectives; with any theoretical lens; and applying any methodological approach.

Topics include, but are not limited to:
- Information security management
- Cybersecurity policy and standards
- Information security governance
- Risk assessment and modeling
- Information security culture
- Misuse of systems
- SETA
- Brand maintenance or recovery
- Cloud security
- Cyber Insurance
- User-interfaces with security technologies
- User perceptions of cybersecurity practice

SAGE Open is a peer-reviewed open-access publication from SAGE Publications that launched in 2011.
